Implement your own ping program

Aim:
To implement a simple ping program to check the connectivity b/w two network devices

Theory:
Ping as a network utility used to check whether a destination device is reachable through a network. If sends a request to the destination and waits for a reply If destination and waits for a reply If reply is received, Connections is successful.

Requirements:
Computer
Python / Suitable programming environment
Network Connection

Procedure:
① Create a new program for implementation Ping operation
② Import the required socket library
③ get IP address on hostname of the destination
④ Create a socket for communication

(5) Send req Packet to the destination

(6) wait for response from destination

(7) If a response is received, display that destination is reachable

(8) Reach the process for required and packets.

(9) Display the result. and close the connection

algorithm

(1) start

(2) Enter destination IP address

(3) Create a Socket

(4) Send a ping request

(5) wait for response

(6) if response is receiver

(7) otherwise display task is unreachable

(8) stop

Result:

Thus, the Ping program was successfully implemented
