Raw Sockets - Pocket Sniffing

Aim:

To write a Program lying Raw sockets to implement pocket Sniffing

Theory:

A Pocket sniffet is a Program used to Capture and examine network pockets travelling through a network interface A router select allows program information such of source address, destination address.

Requirement:

Computer / Laptop
Python
Raw socket Support
Network Interface
administrator) Root Priviges

Algorithm:

1. Start the Program
2. Creates Raw Socket
3. find the Socket to required network interface
4. wait for Incoming network Packets
5. Capture the Packet lying Raw Packet
6. Extra Packet information

⑦ Display Packet detail

⑧ Stop Program when required

Procedure :

① open Python IDLE or terminal

② Create a Python Program for Packet sniffing

③ Import socket module

④ Create RAW Socket

⑤ Use rec from() fun to receive packets

⑥ Read captures Packet data

⑦ Display Packet information

⑧ Generate some network traffic and observe the Captured Packets.

Output:

```
c:\users\Jaayish EV\Python packet.py
Protocol : TCP
Source IP: 57.155.141.117
Destination IP: 192.168.1.6
--------------------
Protocol : TCP
Source IP : 192.168.1.6
Destination IP: 57.155.141.117
--------------------
Protocol : TCP
Source IP : 192.168.1.6
Destination IP: 57.155.144.117
--------------------
```

Result:

Thus ICRAW socket based packet filling Program was implemented successfully.
